PROFESSIONAL SUMMARY

Solutions Architect and Staff Engineer with 15+ years of experience in distributed systems, architecture, and Platform Engineering. At Siemens, I work with .NET and Azure, messaging with Azure Service Bus, infrastructure as code using Terraform and Bicep, Specification-Driven Development, AI-assisted development, and LLM integration into the product. At Fidelidade, I led cross-team initiatives across 17+ teams and trained 300+ developers in engineering best practices.

EXPERIENCE

Solutions Architect & Tech Lead · Siemens Smart Infrastructure Dec 2024 – Present

Lisbon, Portugal

- Work across architecture and Platform Engineering for distributed .NET and Azure systems, defining technical standards for teams.
- Develop in Go and .NET on the user management platform.
- Use Azure Service Bus for asynchronous inter-service communication.
- Use Terraform and Bicep to define and maintain infrastructure as code in Azure environments.
- Apply Specification-Driven Development (SDD) and AI-assisted development to accelerate the development lifecycle.
- Projected over \$1M per year in savings and business value for the user management platform.
- Built APIs and integration services to synchronize identities across enterprise systems.
- Contribute to security, governance, and operational excellence, including IAM, RBAC, observability, and reliability practices.

Senior Staff Software Engineer · Novabase · Fidelidade Seguros Apr 2021 – Nov 2024

Lisbon, Portugal

- Led cross-team Platform Engineering and cloud-native standardization initiatives across 17+ delivery teams.
- Trained 300+ developers in software-development best practices through hands-on sessions, documentation, and technical forums.
- Cut new-service setup time by around 60% with the Internal Developer Platform, which shipped structure, standards, and deployment out of the box.
- My internal EBL (Enterprise Business Layer) template became the official framework for new projects, and more than 70 projects were created from it, counted through metrics on repository naming.
- Created a discovery and security analysis system for 5,000+ Git/TFS projects, correlating ownership, NuGet vulnerabilities, and SonarQube data.
- Improved observability with a logging framework that traced a request end-to-end across every service involved.
- Put an issue classifier into internal production that extracted Jira recurrence metrics and summarized them with an LLM (system prompt), cutting manual analysis by around 70% and removing the need to review thousands of open issues.

Senior Software Engineer · agap2IT · SoftFinança Jan 2020 – Mar 2021

Lisbon, Portugal

- Designed and implemented the initial architecture of a pharmacy marketplace using Clean Architecture (ports and adapters / hexagonal).
- Led performance improvements in data filtering and query execution by optimizing LINQ query composition.
- Contributed to the evolution of core-banking systems for credit-card products.

EXPERIENCE (CONTINUED)

Senior Software Developer · Mttechne · Ticket/Edenred

São Paulo, Brazil

- Worked on the team responsible for a central financial Transaction HUB processing 900K transactions per day with 99.9% availability.
- Implemented event-driven patterns for asynchronous, scalable financial workflows.
- Built .NET Core microservices with hexagonal architecture, Docker, and Kubernetes in production.
- Used RabbitMQ for asynchronous inter-service communication in production.
- Worked with Oracle as the database and orchestrated containers with Rancher and later Kubernetes in production.

Jul 2019 – Dec 2019

Senior Software Developer · Vizir Software Studio

São Paulo, Brazil

- Worked on Natura's global, multi-country consultant registration and onboarding platform, serving more than 1 million consultants.
- Shipped AWS services to production with Lambda, SNS, SQS, and Elastic Beanstalk.
- Worked as a senior engineer on Ticket Serviços' microservices-based financial Transaction HUB.
- Used RabbitMQ for asynchronous inter-service communication in production.

Sep 2017 – Jul 2019

Earlier Career

2010 – 2017

Deal · Vizir Software Studio · Sofhar · Confitec · FCamara · Eris Sistemas · PKZ Plastic

Software development and IT experience across loyalty, retail, e-government, energy, ERP, and enterprise systems.

- Developed B2B and B2C loyalty and points systems.
- Worked with Ruby on Rails, RSpec, Cucumber, PostgreSQL, Sidekiq, and delayed_job.
- Was the only developer of SELJ (sports-event management) at PRODESP, a project delivered for the Sports Secretariat of the State of São Paulo.
- Developed a new ERP with C#, Windows Forms, ASP.NET, and SQL Server while maintaining VB6 and Classic ASP systems.

TECHNICAL SKILLS

Architecture	.NET, Go, Distributed Systems, Event-Driven Architecture, DDD, TDD, Clean Architecture, Hexagonal Architecture, Microservices, CQRS, Sagas, Multi-tenant
Cloud & Platform	Azure, AWS, Platform Engineering, Internal Developer Platform, Terraform, Bicep, Docker, Kubernetes, CI/CD, Azure DevOps, Jenkins
Messaging & Data	RabbitMQ, Azure Service Bus, MongoDB, Redis, SQL Server, Oracle, LINQ
AI & Productivity	Specification-Driven Development (SDD), AI-Assisted Development, LLM Product Integration, Developer Experience
Technical Leadership	Architecture Reviews, Engineering Standards, Mentoring, Developer Training, Cross-team Influence, Pair Programming, Scrum, Kanban
Operations & Security	Observability, Structured Logging, Tracing, Kibana, On-call, Incident Response, Reliability, IAM, RBAC, SonarQube, NuGet Security

EDUCATION

M.Sc. in Informatics Engineering · Universidade de Évora

2025 – 2026

Bachelor's degree in Computer Science · Etep Centro Universitário

2022 – 2024

B.Tech. in Systems Analysis and Development · Universidade Cruzeiro do Sul

2013 – 2015

CERTIFICATIONS & AFFILIATIONS

Microsoft Certified: Azure Developer Associate (2022) · Microsoft

IEEE Senior Member (2025) · IEEE
